

Mar 75

Boston. Mar 6. 1875

Dear Lesley

if you do not embody in some shape your frequent suggestion of the probable relation of subterranean erosion of limestone with our great American lake basins some one else will. I note that Putnam in his work on the Caves of Kentucky is getting around facts as to the extent & antiquity of the caverns. No doubt some one else will hit upon the capital point very soon if you do not look out.

I propose to send you soon the notes a note on the Denudation of the Paleozoic suggested by Prime's paper at New Haven to appear in the Amer. Phil. Socy -

Yours always
T. Sterry Hunt

Prof. J. P. Lesley

over

P. S. I write thus because I have the impression
that you have never put in print the sugges-
tion which you made to me last Novr-

I hope to spend some little time in Penna
in the early summer. I shall be watching
our new copper works at Phenixville,
and shall be glad to run over some of your
geology with Pennock & with Yeaser, and
give the benefit of my experience. If you
have not the means I pay me for the
work. I shall be willing to do it for my
expenses--

We hope to be at work at Phenixville
in May. You know we have a Co. with
Wheatley as presdt. and are getting up
works to treat low grade copper ores
by our process. (The Hunt & Douglas
process)

T. S. H.

Geith is mollified & has written me a very
pleasant note--
