

Grant
Oct 14/77

Ottawa Oct 14/77.

Dear Dr. Dawson.

Most certainly retain the
specimens for your studying &
longer if necessary. I regret
unendingly I am not nearer
you in order to talk over
such matters. Not much
interest in stones here, and
those who venture off the

Concomitants are considered
somewhat soft. Phosphatic
I am happy to state, are
now giving the public
generally a better idea of
geological structure.

Trusting that you
may have a prosperous
session in McGill, which
is now becoming the

Oxford of Canada.

I remain

Very truly yours

L. Agout.
