

Calculus Skull just beneath
Luna in shaft 130 ft deep
at Bond Mountain

At the top of the shaft some bones, just
above the skeleton — also
a fragment of a tibia of a small
mammal, a small shell
the mammal, a shell bearing
it pieces of charcoal

Whitney Specimens Catalogue.

1

1. None of specimens seen in situ by
any European observer
I have places been even visited
2. Most of specimens open to doubt
as to undoubted authenticity of
materials
3. These that of man of
higher type than Modern
Swampy natives but of
very known type
4. Implements chiefly agricultural
many of higher state
than Modern Siam Kings

5. Animals and Plants of deep
any colour pulch
Plumbeous species

6. Date of departure in the as the
age of Birds and reptiles
formed — and lines
very brief period of
Plants of colour of
age.

7. Unlikely birds of Man of the year
but not impossible
as colour with white color
faint

Ameliorate of Skull 210 p.p.
62 p.p. cent Ameliorate of time may
be very fully of power and change
of this into Ameliorate.

8 Sketching of great men by
Winters,

9. Calamus skull for the
New pile of the
pup of the same—

10. Remains may have been a
spongy deep wet gravel
but quite as soft as an
element which may
two tons, small shell
& charcoal.

11. Med. part like old my species
but of ~~the~~^{the} same
not mudstone, Calymene actin
