

DEPARTMENT OF THE INTERIOR
UNITED STATES GEOLOGICAL SURVEY

WASHINGTON, D. C., May 8, 1889.

Sir J. Wm. Dawson,
Montreal, Canada.

My dear Sir;

I have had labeled and packed a small collection of Lower Cambrian fossils from Newfoundland, which will be sent to you this week. As soon as the Middle Cambrian or Paradoxides Zone fossils are worked over I will send you some from that horizon.

I find on page 250 of Dr. Hunt's essay on the Taconic Question in Geology a reference in section 90 to certain Calcareous concretions which he states had yielded to you the remains of a Keratose sponge. Will you not kindly inform me if this statement is correct and if you have published elsewhere anything concerning them?,

and oblige,

Very truly yours,

Charles Walcott
