

require my dear cordence to
convince me that any true
scholar / I mean a work which is
branded in all as falsified, and
which had a wide extent
of Palaeography - Still there
is no doubt that some remarkable
results have been produced
by intercalation of fantastic
seins and I must refer to
your work in Nova Scotia -
I think our disquid will
well do something to clearing
the ground and sifting
the true from the false -

What you say about Dr Dawson's
work in Columbia is extremely
interesting - I shall look forward
to reading his papers and if
I can find time when it comes
will make a précis of it for
some ~~paper~~ ^{journal} or other -

I am glad to hear that all
your family are well - now
that Miss Dawson - I prefer her
present name - is in England
we shall hope to see something
of her -

The past six months have all
been very bright with me - they
have been very hard worked -

I had the misfortune to be obliged
to lose a brother to the pangs of
his age of that horrid disease
cancer, and for the last
two months my sister has been
a poor invalid - There is nothing
serious the matter, but she will
have to live the life of an
invalid for some months, I
fear - Her I hope will have
better health than she has
enjoyed for some time past

With kind remembrances to
Lady Dawson to whom my
sister writes she is in London and
from
I am

Sincerely yours
T. Bonney
