Toronto, Jan 28 1893.

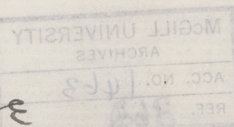

Dear Sir.

A few days ago I read before the Eng. Society of the School of Science, a paper upon *Eozoön Canadense* in which I contended that it was of animal origin. It was ably reviewed, especially by Professor Coleman, and the tendency of the criticism was against its organic origin. I understand, that a paper, in reply is being prepared, in which its organic origin will be attacked. However, I have sufficient information, except upon one point, and that is;—the standpoint taken by the majority of European & American Geologists. If you would forward a brief note upon this subject you would do me a great kindness, as this is one of the points which my opponents made much of, and upon which I have little information.

I remain
yours etc.
