

Steamer La Sague

July 1884

Dear Seage,

Respecting to be in
Albany and being uncertain of
catching the mail if we
won't take arrival in case,
I enclose with this some
rough notes as to the
points of western geology
in your case.

I may say in addition
that we mention further as
to the west that is the

48
Relative levels of that
plain and Pop Creek.
Your second section gives
an elevation to the
latter sufficient to put
it above Med. Hat. What
are the actual levels. This
might I think be as-
certained by inquiry of
the railway engineers. It is
clear however that showing
the Med. Hat beds not at
the top of the Pop Creek section
they must have risen
slight up to the west.

Mother desires me to
say that she cannot write
by this mail but sends all
love and good wishes for
the new year and thanks
you for the Christmas card
you sent which she
thinks the prettiest she
has received. Love also
sends her very kind love

Ever yours

M. Dawson
