

McGill Col
Mch 30/87

Dear George,

I have now gone
over the Laramie plants
with the numbers you
sent down and find
that the results cor-
respond very closely with
the statements as to the
stratigraphy.

Nos 16, 18, and 63
contain only Lower Laramie
plants (St Mary's series)

Nos 45, 41, 47, 52
have upper Laramie

Just Miss Plant.
(Porcupine Hill series)

No 19 is uncertain

Nos 36 & 57 have
not found.

The lot of small
specimens I mentioned as
my last in hard
calcareous stone & holding
some Sarawak plants
includes nos 16, 18 and
63 of Mr Kroell.

I found to-day
that the Nova Scotia

Some Carboniferous plants
reported on some time
ago thought packed
had not been sent
up to Ottawa. I
shall send them as
a day or two. They
have labels with the
names which Mr
Weston can attach
to them.

Do you need any
more — ordinary laboratory
men — & for a few

Zurben expedition. I wish
became some have been
applying to me and I
have discouraged them,
supposing you will take
up the Scruple part
of the staff from Ottawa.
I never could gladly go
without salary; but
could wish to be a can-
didate for the important
Sherwin's place should
Adams leave.

Die has taken measles
I is with us. The rest are
well.

Yours truly
J. M. Dawson
