Dear Dr. Norris:-

Thanks for your papers, with which I am greatly pleased, not only for the evidence of good work they show, but for the memory of your father and grandfather. The tuberculous endocarditis paper is most interesting and will be very useful, as I have just been going over all of our material on the subject. Could you not come down some evening and give us a little talk at our Laennec Society. I send you our programme, and you will see the sort of work we are trying to do. We have rather a short programme for ~~Oct.~~^{The} 27th. Perhaps you have some short communication which would do for that date, or perhaps it would be better to give us a longer one at one of the early meetings next year. By the way, as you have been going over the post-mortems at the Philadelphia Hospital, have you any statistics on aneurisms?

Sincerely yours,

Wm Osler.
