(handwriting)

(To Lt. Col. Sir Leonard Rogers, IMS)

13, Norham Gardens, Oxford.

30.XII.18

Dear Rogers

Have you anything more on the primary sclerosis of the pulmonary artery? Were any of your cases associated with aneurism? Do you see that the So. Am. physicians have described cases as Ayerza's disease - cyanosis - dil. heart, & polycythaemia? I have a brief reference to your cases at p 844 of my last Ed. Where did you describe the cases originally & what date? Greetings for 1919.

Yours,

W^m Osler.

(Letter informing me that the pulmonary atheroma I had described in 1908 had since been called by the name of another physician. Cf. B.M.J., Sept. 25, 1920 p. 487 for history of this disease. L.R.)
