

a loops as nice.

l-

Mr. B. G. Harrington believes in doing things in a "big" way. He arrived in the Observer office the other day with a potatoe which was 16 inches in diameter and weighed 3 pounds. There may be larger spuds than this but from 15 pounds of seed potatoes he has just dug 988 pounds of potatoes. The variety is a new one to this area, indeed to B.C. and is what is called the "Sequoia" potato. He secured the seed from the States and the first crop lived up to all advance information. It is understood the B. C. field crops department is quite interested in the experiment.
