

11 Harley St  
London

Feb 20. 1847.

My dear Sir

I should be sorry that  
you should not visit London  
& the Geol. Socy & be introduced

to the geologists here.

As I think I should be  
able to get the Pres: &  
appoint an evening to meet  
you convenient if you would  
tell us before hand when you  
could best be here, you  
had better write to us again  
unless you find it un-  
profitable to come.

I will do my best about  
the fossils tho' there are  
so few who can name  
them & it is so difficult  
to get at them when they  
have been (if they can be)  
tho' I will not answer  
for it.

I think you represent  
in one paper a portion of  
the true carboniferous (Lancaster  
I think) in Nova  
Scotia as unconformable  
& another part. This

fact was diminished <sup>chronological</sup> the importance  
of the unconformability of the Salomon  
river case when we saw together -  
altho' I grant that the view  
prevails in my mind of the greater  
difference of age in the case  
is strong - But I should be

very cautious as beds with  
fossils may be anything you like  
carboniferous - Permian, Triassic,  
oolite (like Virginia coal near  
Richmond) &c -

can furnish you  
Chazy

The packet is not even  
but I have ordered that Somerset  
It when it arrives -

observe  
my address
