

My dear Sir
Your Amalgam Pearl
is a true oolite very
similar to that I have
described in the Journal
Cartesian, at Warden
and not unlike some
of the Booth oolites but
more perfectly crystalline,
The Nuclei of some
of the concretions are fragments
of shells and
corals and in some
instances I observe entire
shells and I think the
are very satisfactory. Yours

Copy of Letters
Jan 1790

The first volume of the
Blum collection of Mrs
Baker & I should
remember I have
heard of my children
