

GEOLOGICAL SURVEY OF CANADA

(Museum and Office, 76 St. Gabriel Street) MONTREAL.

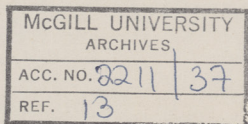

17th Oct 1871

Dr J. M. Dawson

My dear Sir

The fossil is
as you observe a Lepanditia.
Jones would call it an
Isoschilina which I hold
to be the same thing as
Lepanditia. Judging from
its size I would call
it J. Ottawa Jones, a species
which I know to occur
in the B. M. Culbert Lake.
Perhaps Dr Newberry's
fig. is enlarged.

Yours
Very truly
O. P. Silliman

GEOLOGICAL SURVEY OF CANADA
Museum and Office, 75 Queen Street, Montreal.

Drilling
W. Peabody
Oct 11/11

My dear Sir
The fossils in
as you observe a separate
fossils were also in an
Leptodermis which is
to be the same thing as
Leptodermis. They are
it is a small, cold
it is Leptodermis, a species
which I know to occur
in the B. N. District Lake
District of the Laurentian
fig. is enclosed.

Yours truly
G. Peabody
