

163 Dorchester St.
Boston U.S

Oct. 20th 91

My dear Sir

As I was about starting for
Charlottesville I did not reply
immediately to your letter

I learnt when I arrived there
that the box containing the
fossils had been sent to you
as also specimens from the
several beds which I expect
you would not need -

When your report is published
I will be very glad to have

a copy if you have one to spare - I have come to Boston to see if any Manufacturers are in want of a Chemist I have been here 5 days and have heard of nothing yet Is there any chance for me in Canada - - -

I am having a pamphlet published in Charlottetown which will contain Analyses of the Mussel Mud, expect it out in a fortnight and will send you a copy - It is mostly interesting to F. E. & Farmers who are now using the shells

muds indiscriminately, often
taking a useless mud when
a more valuable sample
is close at hand -

The footprint? - on the slab of
Magnesian slab is left in the
care of Dr. Stewart Alberton
It is a Cast ^{in part} but indistinct except
in portions - It will be at your
service if you require it - and
you can have it by writing to
Dr. Stewart, I left it with him
for you

Yours truly
J. W. Taylor

Dr. J. M. Dawson
