

Lalru mass

May 26th, 1872

Dr. J. W. Dawson.

My dear Sir:

I want very much to study *Rhyacionella pottalica* alive before I publish my papers on the Braconifera. and I remember you told me a year ago when I passed such a delightful hour with you. that you found them in abundance at some place down the river.

May I beg you to tell me where you obtained them. How far from Montreal and what expense it would be to go there. also what accommodations I could find there.

By answering these questions at your earliest convenience you would very greatly oblige me.

I start for Exeter tomorrow evening to be gone ten days. and after my return home I want to go directly

to be neutral and start from there
for *Rhyssobrycon*.

If you will direct your letter
simply to me at Salem Mass
my wife will send why W Eastport
should I still be there.

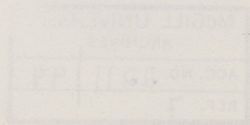

I send with this a small paper
on Early stages of an Ascidian
and also another on the
Carpus and Tarsus of Birds which
I hope will reach you.

Hoping you will excuse me for
troubling you in this manner

I remain

Very faithfully
W

Edw. Morse
