

Sydney, C.B., Nov 27

My dear Sir,

In looking over your
books at the Eury Min
I hit upon what I take
to be an example of the
fructification of Actino-
phytes. As I can hear to
know from Down that this is
rather rare I forward the
fossils by Mr. Stedman, who
has published on the

day, for your examination
was mentioned particularly
by "settles in the exits of
the hairs" but this is ap-
parently by a kind of
cathin issuing from an
unusually large whorl
of hairs.

Trusting that it may prove
of interest

I am dear Sir
Very faithfully yours

Alfred I. Hall
