

Cambridge, Dec. 4, 1875

My dear Sir

I have just received a note from Mr Dawson announcing his discovery of fossil tertiary insects on the banks of the Traver and offering me the study of the collection for which I ^{have} written him my heartiest thanks - He writes also that he has not yet heard of my receipt of the ~~4~~ 5th from his Report, which I thought I had acknowledged to you at the time, but if not hereby do so.

I write to say that the long lost drawings of the Carboniferous myriapod have just turned up in my moving my library and have been set for printing in the Boston Socy's *Memoria*. They consist only of a segment or two

contiguous segments of each species
with a camera sketch of a part of
one animal and an enlarged antenna.
If you care to use the cut in the
Can. Naturalist or in any other
way I can procure it for you at
some time; it is on one block
& on black ground -

Yours very truly

David H. Sudds

Principal Dawson

P.S. I have addressed W^m Dawson at Victoria

Deer Sir
