

Worm

Wolchia subrotunda

Branch, stem strong and the ~~it~~ marked
with wavy ridges and furrows, laminae
by slender, mostly at right angles, mucous
crowded, leaves deep appressed triangular
pointed scale-like.

Now to *Wolchia subrotunda* of Saper
Saper but differs in proportion of parts.

Culamites areolaris

Stems has chambers of ~~the~~
Saper but as *Culamites* is ~~now~~
the more described state of ~~as~~
Syncretism these characters, not ~~as~~
and not up to July 7 then collect
C. ~~as~~ in the ~~as~~.
