

Amherst Mass

Apr. 12 1883

My Dear Sir.

Since I sent you
specimens of Lycopod Spores at
your request a few weeks ago
I have come upon some more
material which had been
mislaid & forgotten. The specimen
which I found was collected some
time since from a Coniferous boulder
near a Coniferous outcrop, in
a spot difficult of access but
carefully located in my notebook
so that, though I may not be
able to obtain any more

I have retained, you are welcome to read their sections
if you wish. It is the beauty & perfection of the Hall of
Preservation of the species is unique & I hope that
you will find them of assistance in your study.
They are from the territory of Sarandaguan, N.Y.

Very Respectfully
Yours

J. M. Clarke

specimens of the rock for two
or three years on account
of probable absence from the
country, I shall have the means
of securing more eventually.

The single fragment that I
had I have broken up entirely
for sections and I send
to you to-day two of the
slides I have made, which
show the structure of the
spores the best & contain
also a trace of a receptacle.

These are the only slides which
show the receptacle and as they
also show the spores themselves
better than the other slides which
