

M. Gill College.

July 12/75

Weyden in Watt,

State the

chief of several from

another few with

fracture - this  
stone from the coal

formation. It has

apparently coal in.

suria on the vessels

near the edges of the

perules thus -

They look a little

like *Styplemium* but  
there is no sign of  
their opening at  
the margin. Per-  
haps you may  
have seen some  
thing similar.

See there is  
a new edition out  
of *Harkness Species*  
*Filicum* (I think)

Would it be as  
good work for the  
College Library, and  
is it very costly?

Truly yours

J. M. Mason
