

Some. The vegetation
evidenced by the middle
Laurentian Gneiss, the
marine life indicated
by the great limestones &
of Corom. The Corom
Cavaneum (for which I do not know)
the S. ulithus, cheveroles,
& Apudella of the Huron
may be seen here at
Canton and since we
may have new facts
respecting them.

Truly yours

J. M. Dawson

If I can get away by the Red Star
I will be in town in time I shall
send it to you

McGill College.
Montreal.

May 28/84

Dear Dr. Hare,

I doubt
the utility of printing
such notes as those
sent to you without
further explanation.
So very little is known
by most geologists as
to the real nature
and arrangement
of the Precambrian
rocks and to much

May 28/87

INTERNATIONAL CONGRESS OF GEOLOGISTS

AMERICAN COMMITTEE.

OFFICE OF THE SECRETARY, DR. PERSIFOR FRAZER.

201 South Fifth St., Philadelphia.

May 23. 1887.

Sir J. W. Dawson
McGill College. Montreal.

Dear Sir William

Accept my thanks for returning so promptly your answers to the questions which I proposed. I should be under additional obligation if you would supply by suggestion any possible omission of importance which you may think apparent in these questions, of which the aim is to include all the chief difficulties connected with the subject. May I inquire whether you object to having your notes printed in part or in whole along with those of Dana, Pelwyn, & others from whom I have heard, in case the Com. should decide to print for the benefit of the delegation to the Congress? This can hardly be done for several months in any case.

Yours truly
Persifor Frazer
