

Dr Moebius

July 17/76

Kiel, June 18, 1876.
Germany.

My dear Sir,

I say you many thanks
for your kind letter and
the adjoined pieces of
Eozoon and Stromatopora.

Your "Life's dawn on
earth" I have studied
with the greatest interest
and also your last "No-
tes on the Occurrence of
Eozoon can. at Côte

St. Pierre," of which you
have kindly forwarded
a copy to me.

Please, induce Mr
J. C. Weston to prepare
me a set of good Eo-
zoon-slices, which
show distinctly the tubuli
and the stolons. I should
be very glad, if you
would be so kind to
send me specimens of
different varieties of
Eozoon and Archaeo-
sphaerina, which illustrate

in a good manner the
red nature of both
and for making slices
here.

Please forward all
together in one case by
mail or via New-York
by the Bremen Steamer
or by the Hambourgh
Steamer to the Zoological
Museum at Kiel, and
adjoin an account of
all disbursements, which
I shall reimburse directly
by post or otherwise with

my best thanks.

Believe me

Yours very truly

Dr. Karl Moebius,
Professor at the University.

To
Principal J. W. Dawson
Montreal.
