Feb. 22/77

Dear Sir

I enclose you two bits of
the Linnæus from the pre-Cambrian
(Dinorthis) rocks of New York.

I have not seen anything in the
Linnæus distinct enough to
determine its ^{unsubstantiated} fossiliferous the 'Island
believe in the probability of its being
so. I have made a few slides
of descriptions with appear in the
paper (chiefly mineralogical) which
intermittently appear in my next
issue.
Yours truly
H. Hicks
