

Windsor N.S.
30th April 1777

My dear Sir,

Thank you very
much for your kind note -
I start tomorrow for
St. John's, and when there
I may have occasion
to write to you again -
as I will be some time
before the Coast is clear
to the North.

I send a continuation
of the paper on 'Pan Ice'
Some time since, direct to

Hand
C. P. G.

Frasen Carrance, it is
entitled "Snow Banks"
a rather treat of the effects
of perpetual Snow Banks
on the Saluda valley
as a feature there of
great importance in
moulding the condition
of the Country.

Snow Banks cause
Dan Tce de a good
deal of Geological
Work in that region.
and their effect upon

non circulation,
very dry bones
Henry Wood
