

GEOLOGICAL SURVEY OF CANADA

(Museum and Office, 76 St. Gabriel Street) MONTREAL.

Matthew

To John M.P. 8th May 1877

My dear Sir

I send today by express to the Survey Office, a bundle of pieces of limestone with much serpentine which are all that I have gathered for your purposes — you wished me to send limestones that I might think likely to have Eozoon — Those marked "Lily Lake" are from "Upper Series" "Div. 7" see Report 1870-1 page 31: and those marked "Hegans" are from "Div 5" in "Upper Series"

I intended to have sent these with the other

specimens I sent to the Survey Office in the beginning of the year, but could not find them when those were packed —

Hoping your trained eye may find Eozoon in some of them I remain
very truly yours

Matthew

P.S. I have your book on Eozoon and have read with great interest the complete evidence of organic nature I wish I could have done better in collecting but perhaps may find something more definite at another time.
