

Museum d'Histoire Naturelle de Paris  
10<sup>th</sup> 1878.

My Dear Sir,

Many thanks for your interesting papers which I have received to-day.

I value them the more as I am now busy about silicified seeds of the Carboniferous age, found in the coal-mines of St Etienne.

My g. Father Ad. Brongniart had published a very important notice about the same subject, which I beg you to accept.

It will come out at a later period, with extensive improvements, and beautiful plates concerning the anatomy of these seeds.

Mr. Schyder (I think) and Mr.  
Horn have sent me, the diploma  
of Corresponding member of the  
Philadelphian Academy of Natural  
sciences. I think it is owing  
to your kind recommendation  
that this favour has been bestowed  
upon me, for the which I feel  
most thankful to you.

Believe me, My Dear Sir,  
yours very gratefully

Charles Bronziniart

I should be very happy to  
receive your all future papers  
on fossil plants and animals;  
I myself shall send to you my  
publications.
