

July, 19. 78. My dear Sir. Three species which would
be the most desirable to me, would be species which
have been described by you, more especially the
Brachiopoda, of which - I am making an especial study.
Specimens showing good interiors are particularly
desirable. Some of the Waldron forms I can
send quantities if you so desire.
Hoping to hear from you ere long I remain
Very truly
yours, Wm. Gurley
