Dear Dr. Dawson,

Some of my friends here are anxious that you should write upon Haeckel's "Evolution of Man", giving in that connection a survey of the Evolution Hypothesis as affected by progress in Scientific Research.

Please let me know how this topic may strike you.

I have not yet ceased to hear  
pleasant things of your effective  
November article - Many of  
our best critics have spoken  
warmly of it. Dr. Hall commended  
it to the careful attention of his  
congregation from the pulpit  
and it is not too much to suppose  
that a thousand sermons have  
been more or less strengthened  
by its vigorous expositions.

With the highest regard

I remain &c
