March 12, 1887

My dear Sir,

I now send by
book = post m.s. of White a
Continental and Island life,
It is somewhat long; but I
flatter myself gives a clear
and exhaustive view of the
true principles of distribution's
and should I think excite
some attention. You will
read it carefully will have
a better comprehension of the
questions affecting distribution
than that afforded by Wallace's
book, and with me

able to understand the
real questions involved
and to see how far
they bear on the question
of evolution and Wallace
quite unincorporated views
with them.

Truly yours

J. Darwin
