

My dear Prof Beer

I can quite understand the
opinion expressed in your last kind
letter that we find you now a few
facts.

1. You speak of Vancouver Id as
if it were a separate island
There are no volcanic cones visible
there & the whole is a flat with
only a few low hills.

2. As regards the other islands
could please look at the coast
which shows the degree of elevation
& we feel sure, evident already
into this the plants added in
the other islands than we are
and hope to be pulled the
whole series.

3. In your recent paper that
Dr Schimper will create my great
wonder for paper that there has
been to the point of 40 pages. This
I suppose that & I have meant
to my mind as to us, they has no
you have a few cup pages. There is
of course any for the other of the plants
of the other. As to Dr Schimper's

I conclude it is by Cape York
Open (a) and it enters in
the Semipalm. just near the
B. point. Then another run
Open (b) which is near to S.
point. The first Open (a)
request is the case of Jay's
