

Co S: College Building,
Easton, Pa., Sept. 30th. 1881.

Dr. J. W. Dawson,
Dear Sir,

My Mother informs me that she
has received another book for me from you
—"The Chain of Life"— I write to let you
know that the book has been received and
to thank you very much for it. I fear
that you are sending me too much, in
exchange for my box of fossils, and that
I have troubled you—almost unparadonably.

Can you give me any advice
in regard to the method of examining green
sand for casts of foraminifera? I am
anxious to study some of our New Jersey
Greensands microscopically, but do not
know just how to set at it, Has
anything attainable, on this side of the water,

been written descriptive of our New Jersey
forms? Is there any published list of species?

With many thanks for your kindness,

I am Yours very Truly,

Frederick Starr.
