

Walsley

The Downs

Bowdon

26th June 1883

Dr. Dawson

Dear Sir

Accompanying, I send
you a small specimen of
Chalk, taken out of the
Tunnels, under the Sea,
now being cut at Dover.

It is from a considerable
depth below the Bliffs.

The lines, are made by the
Cutting or Boring Machine.

The Metallic Specimens are
found embedded in the Chalk.

The Beaver, Mr. Chas. Stewart,
is a very worthy, Christian
young man, who has been
actively engaged, at a Night
School here for a long time.
Would you please give him
permission, to visit the
Museum, to study.

He is very fond of the
Microscope, and would be
glad of any facilities, to
study it.

He comes out to the Freight-
Department, of the Grand Trunk.
He will join Dr. Stevensons
Church

With kind regards to yourself
and Mr Dawson

I remain
Yours Respectfully
W Wood
