9, VICTORIA CHAMBERS,  
LONDON. S. W.

26<sup>th</sup> October 1883.

Dear Dr. Dawson,

In the paper that I propose to read at the Society of Arts, I should like to give some information as to the progress that has been made in connection with scientific education in Canada

Canada during the last few  
years. I should be very  
much obliged if you  
would not mind giving  
me a few notes on this  
important subject.

I want to be able to  
say that certain branches  
of science are taught in  
all the colleges and in  
a good many schools in  
Canada; and to mention  
some

source of the principal  
scientific zoological and  
few Geological Societies and  
Institutions that are scat-  
tered over the different  
parts of the country.

I do not want to give  
you much trouble in  
to this matter but if you  
are passing this way,  
in before you go to the Cou-  
tinent, I should like to  
in have the opportunity of  
in talking it over with you.  
I

Colme  
Oct/83

I can then take notes of anything that may be necessary; and communicate with any persons in Canada whom you think will be of assistance to me in the matter.

Yours very faithfully,

Josh Colver
