St John. No 10 (Chandler)  
& James 1885.

My dear Sir

I regret extremely that  
you will be unable to visit New  
Brunswick as I am sure you must  
have been greatly interested in what  
I write here there you - I was  
most anxious to submit the working  
of a new Electro-magnet on  
mammal veins - I send with this  
a little note which perhaps has  
not fallen under your observation  
I send you also the A. June 19  
22, 309 36 marked II - I claim  
the inv. of the magnet - for I  
I have been attending on it  
a very few days and to be  
able to give this to the doctor -  
just one of the most wonderful -  
I know to what purpose the

Magnet has been subjected - I shall now detail to you my experience of it. Some two or three years ago I went on some Copper Mines, the nature of which was well known, with a Magnet which the knowledge of which my father told them all then a great part on American - The Magnet took up the Mines near as exactly as I then then estimated that the principle was right - After this we went on the property of the late Albert Smith & company with the the dangerous machinery the about that that the Mines were taken up accurately - After this experience I expended a great deal of time & money in experiments & prospecting for the best - Electricity however

profession - 33 in all who passed  
the first school - Out of these  
33 two only were ever seen  
I collected to a certificate - of  
these two my name was one  
The "St. Margaret" is in style  
my Brother's act in the principle  
of attraction - For instance in the  
holder there are placed two  
numbers, one of which must be  
the number of the school for an  
12 term - I suppose you are a  
great of an Abbot's Neri one  
of the numbers must be Abbot's  
- a small piece of paper as  
you appeared the Neri the  
Margaret depends toward the  
Neri as you get on the  
Neri and it is very near  
the surface the garden can  
hardly hold it -

The reason the Magnet Stone  
occurs in very peculiar spots  
to the ground surface - It seems  
that a band of rock containing  
Iron will attract any Magnet  
to contain whether it is Iron  
that is a the other way place a  
small piece of Magnetite Iron  
in the spot In a minute  
a line of it is Iron, the  
Magnet will seem to be  
attracted by this is white  
in the Mineral you are in  
search of & the Magnet is  
still attracted you may see  
Iron you see all right these  
Iron bands have been the cause  
of my reported findings in  
Atholite of gold & the It would  
give the ground Professor that  
in a region the Janet of the  
Atholite Magnetite Iron - We
