

Dorchester Mass.

10 Jan'y 1887.

Dr. S. Williams Dawson.
Dear Sir

I send you some samples
taken from a Boulder mass -
- directly analyzing what you
consider the Di. Th. rocks. And
and at a depth of about 14
feet from the surface. These
samples may interest you as
they contain good plant
impressions and also wood
of an Di. Th. character.
I shall at your leisure,
be pleased to discuss if they
have any interest for you
or send me any way the
value the very decided fossils
expressed in your letter of 27 Nov.

Assuming for the present the
 correctness of the Magnet the
 relation problems of the Dr. H. H. H. H.
 and the San Antonio rule by which
 in the Indian angle that is -
 the San Antonio underlying the
 word - In the Magnet the
 thickness of the word is
 upwards of 30 feet and
 that of the San Antonio that
 is 20 feet -

We expect to receive
 work as soon as the matters
 permits and prefer making
 a pit for 20 or 30 feet in
 width in each the word
 which in the case to think
 is done at home

Yrs. very faithfully
 E. P. H. H. H.

Chandler
