54 & 56 West 55th Street,

REV. G. W. SAMSON, D. D., PRES.

MRS. E. S. WEST, LADY PRINCIPAL.

New York, Oct 30th, 1888.

Prof. J. W. Dawson,

Dear Sir,

Many thanks to you for remembering me as you have kindly done, in sending a copy of your very valuable & interesting resume of the Ezoön question. As you are aware, that subject is one in which I have taken much interest, tho' unable to contribute to its solution. There are hardly any specimens in my cabinet that I value more highly, & few as highly as, those choice & characteristic pieces of E. canadense that you sent me, years ago, labeled in your own handwriting. Claps after class of my students have seen them, & heard them explained & discussed.

1881
I am very glad that you have
put on record this summary of facts;
& I can only say that to me it does
seem strange that any one can fail to
accept the organic theory of Eozion.
I have long felt so; but the reading of
your paper greatly confirms me.

Next summer, D.V., our "A.A.A.S." is
to meet at Toronto: I shall hope for
the pleasure of meeting you there.

Very resp'y & truly yours
D.S. Martin.

P.S.

The only scientific work that
I have had time for of late, is the geo-
-logical map of our neighborhood, of
which I enclose a descriptive circular.

D.S.M.
