78 Maunce St  
Mach 3/911

Dear Sir Wm Dawson,

Thanks for your

letter of Saturday with its enclosures.

The concretions I have differ somewhat  
from those described by Prof. Kavanaugh.

As to Scoliate I did not understand  
until I had read Saturday's letter that  
you had personally collected this  
species in Nova Scotia.

I shall analyze the two specimens  
you sent me, using as little material  
as possible, and return you the balance  
with a statement of the results of the  
analyses. If possible, I shall not  
be able to do this before next week, as  
I am crowded with work at present.

Yours faithfully  
J. T. Donald
