Dear Sir

I have to thank you for your kindness in sending me several pamphlets of your paper on the Tertiary fossils and also for the box of specimens returned. I propose to place these on exhibition with the Hist Hist & Sc Association here. I am desirous of becoming a fellow of the Geological Society of England. Would it be asking too much of you if I ask you to sign the nomination paper as one of the three signatories required. One of the others will be, I know, H W Moulton, Sec Geologists Assocⁿ Eng, who was a member of the Council of the Geological Society for some time, and may be this year also. I send by this mail one of the papers referred to in this nomination paper which may have some slight interest for you although it does not aim at great things. The other (The auriferous series of U.S.) I do not happen to have any spare copy of. I hope soon to be able to undertake some more work fossil hunting, although at present teaching geology and mining precludes from doing so. Thanking you for the trouble you have taken over the fossils

I am yours faithfully

H W Moulton

I have the pleasure to thank you for your kind letter in relation
to the receipt of your paper on the history of the
of the of specimens returned. I propose to place
it on exhibition with the other 20 specimens
I am desirous of presenting a paper of the Geological Society of
England. Would it be early for you if I ask you to
sign the communication paper on one of the three specimens required.
One of the others will be, I have, to describe the "Geological Society"
cup, which was a member of the Council of the Geological Society for some
time, and may be this year also. I am of this kind one of the papers
to in this communication paper which may have some slight interest for
you although it does not seem so great thing. The other (the one
series of 12) do not appear to have any other copy of. I hope you
to be able to undertake some more work for the Society, although it
is not looking forward and having friends from being in. Thanking
you for the trouble you have taken on the fossils.
I am yours faithfully
G. F. Barman
