

Park Corner
Blundell's Road
Oct 3 1896

Dear Sir William

I write to thank you for
the copy of your "Canadian
Ice Age" which I have read
through with great satisfaction
- It is quite a treat to find any
one now a days considering the
subject from a Lyellian Stand
point & giving due weight
to all the evidence that must
have been at work in unspooling
butcher clay & to prying the
Y-3^o of the front-formation
- I confess that the picture

things to me that come from
America with their unreluctant
attention to the continental
specimens, several mammals, bones
of the Gr Ice Sheet & the general
picture of desolation which I
for me do not think the continent
was presented to me with
attention for me. Your work
is a sort of basis in the
derivation of ice! - Of course
there are some points on which
we differ but as a whole I
am in cordial agreement with
you -

I have to give my Presidential
Address to the Acad Sci Soc on
the 13th inst. It is in "The Present

Aspects of Glacial Geology". It
will be my "Sixth" & I have never
touched the subject in a Presidential
Address before.

I trust that you & Lady
Dawson had a pleasant voyage
& good weather though we
have had the equivalent of a
hurricane & that you arrived in
Canada in good form - My
dearest desire (to be remembered
by kind) to you - The British
Army contingent is all over us
we shall settle down into the
business concerns of life -

I remain Yours
J. William Reade
