July 31

188

Dear Sir

My friend - the late
font print - the Devonian
Canyon tell me of the Kuala
Slab of rock which I found
in Kern Island, by Chalms
has been examined by you and
determined. Several slabs
are found in the (I had)
the rock a good preservation
of the Curious markings probably
of plants with bundles of
what appeared to me fruits
has obtained at the same time
but I have more to examine

They were probably heretofore
as they are the only specimens
I have seen from the
excavations at Manchester beds
of that locality -

Accept my thanks for the
copy of such trees for
Japan - and I am
Yours very truly
R. W. C.
