Boulders, Cune

Here —?

Relatives to Low
venter drift

Near Wabigoon
cutting in duckpen
plant stems of dog
to S wood >

243m West 244m
Near Paul Winnipeg
Station

Strat red and
green clay
no stone in
beds
seen in road
cutting

Here area of
Amundson beds

Flow ^{Be} ely
se old

A fracture of
red & grey clay with
blue water is
some blocks of
Glaucous before

It is possible that
Tertiary or Cretaceous
clays remain
or is it at drift—

All rock ridges
have boulders
four feet
than at sides

Wabgon I heard
that just down
to the SW in the
day

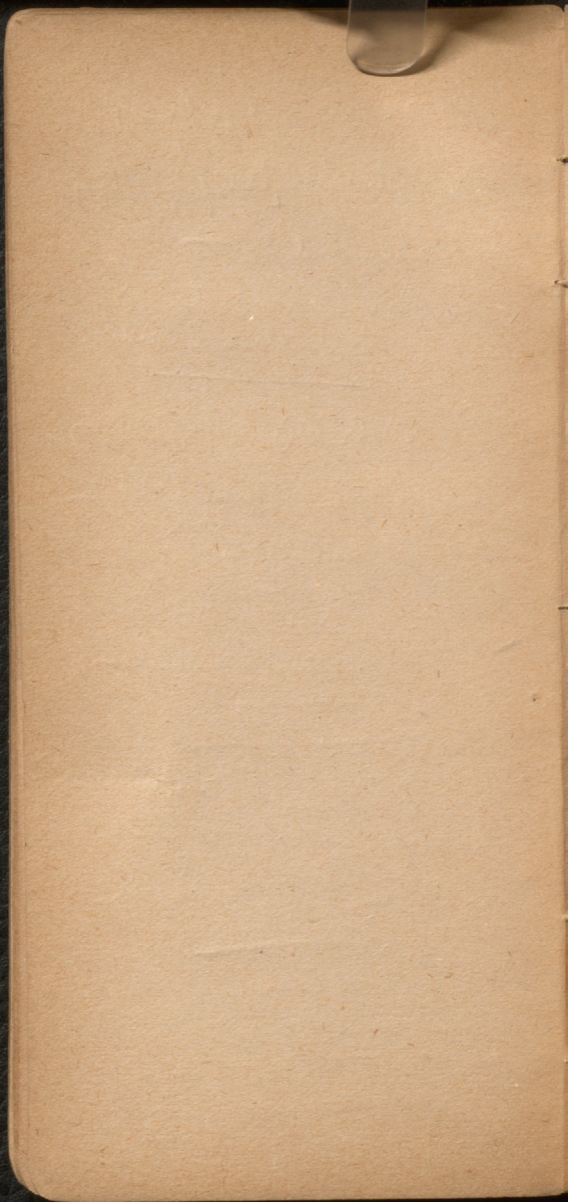

Amur slates
distinct near the
Lake —

Julene sent to
harder slates

The R & S clay by
gray blue gray blue
& brown clay with
thin & few sand
beds near
redps

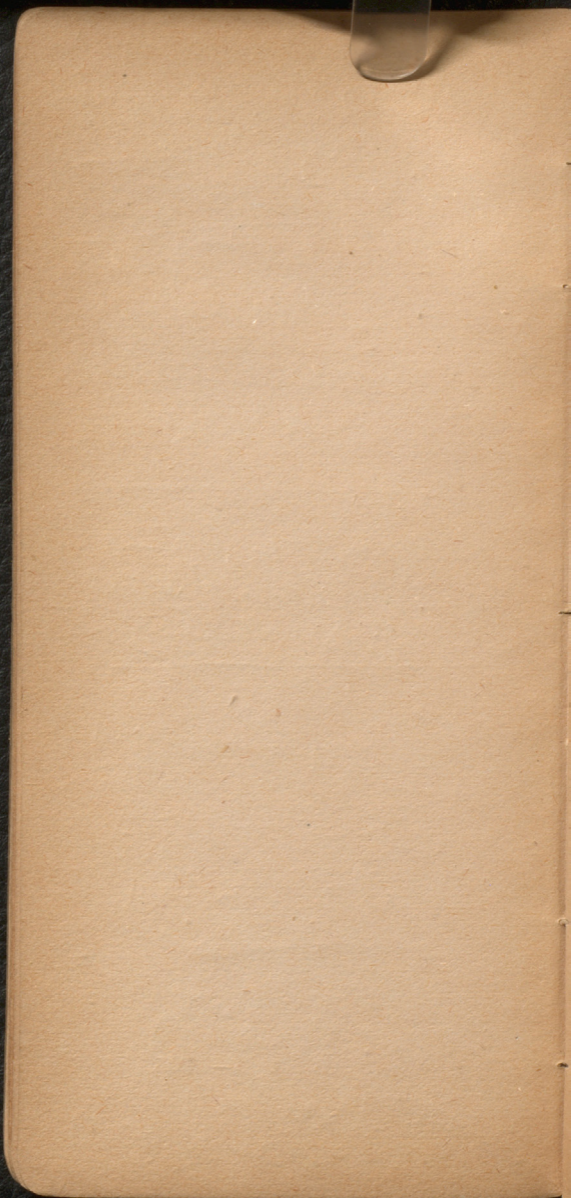

On whole Amur
measures best
in the district

In cuts near Am.
Clay seen
to be underlain
by sand & fine
with rounded
laminated pebbles
& shales

Wapogon R.
Fall in Rapids
of fine shaly clay.

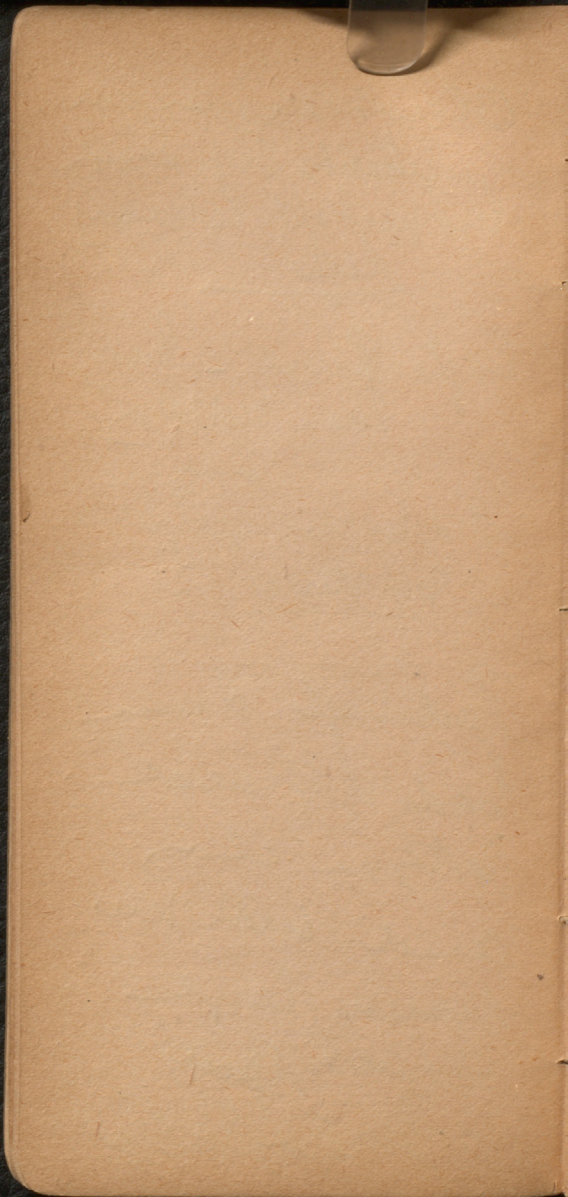

Fossiliferous
strata, beyond
Wapogon R.
outcrop of others
close fossils
into troubled by
in valley of
red clay on

Clay seen in some
banks 30 ft deep
but not all the way
up

Eagle Stone - fine
tan red
clay
Red below grey above
no stones

Part Eagle Run
beds of gravel
partly in clay
and with no
main lens
gravel (fine)
blocks larger
above

At this point clay
band ceases & sand
of general nature

Remains by Red
of gray structure —

Capped with
Domeless Clay
and ordinary
Clay

New Lake is
a part of
Cagle Lake

Brought the deep
rock cutting
Red & grey quartz

Red eggs clay
resting in x

Mud of this group
is of a tender
decaying chert
but on exposed
surfaces retains
fold & strain
= recess of there

Lament medium
mate at the end
! of layer of brown
present

Gilbert Star Source
at Court
Mud & deep
+ decorated
