~~Similar to the above~~

Slime columns of the  
 mounted water tanks with  
 radial pores and transverse  
 marks at sides = Nereis &  
 sometimes like *Asphondylia*

Slime columns of *Squilla*  
 & *Glycera* make branching  
 tracks,

Romer has already called  
*Asphondylia* a track

Is inclined to give up  
 even *Asphondylia*

*Oldhamia* he thinks may  
 be a track - but of what?  
 Notes will 2 marks

Specimens are from  
both unbed

Many dendroidal forms  
look, crystalline &  
angular, flattened  
with some granules  
& lenticular ones
