13 April 85 -

Dear Father,

Mr Weston showed
me this morning the
slice which he has made
& is sending you of the
Sellar Coal. It is very
curious, evidently spurs or
something of the kind very
like the macrospores figured
in the last Silliman's
Journal. They seem to be
in cases of some kind,
quite large & a great
number in a case. I have

Spoken to Dr Selwyn about
 the drawing of the plants, & he
 thinks there will be no difficulty
 in getting Sembr. to do them,
 so you might send
 a few along as soon
 as you have done with
 description etc.

Yours
 George
