

Ottawa

March 12. 92

My dear Walter,

I have written
a note to Mrs. Greenhalgh
about Indian names
& return her note enclosed.
My expectation of getting
down I wanted this week
did not turn out correct.
I have not yet heard from
Sir Euge & so believe that
he has been delayed
somewhere. When I do
hear I will let you at
once & I suppose this time

over before long.

I have been looking over the
Carbon or rather Permian
bones I got last summer in
Kamtschatka. There
four pairs to dispose of
two large & two rather
small, all strongly as
is their nature. The two
smaller have skulls attached.

The two larger are rough
bone & hold the antlers
together. The largest pair
measures about 4 feet
total spread. The next
3 feet 6 inches. The two

Swaller ones about
 3 feet. The question is
 which of these kinds of
 Seyes would suit you best.
 One pair I thought of
 naturally giving to Hojse
 & another I suppose I
 should keep. Please
 let me know your taste
 as to size.

Yours
 Surge
