

June 11th / 94

Dearest W -

Another pleasant letter from you - you seem altogether to be having a much better time than usual when away from home, & you need not feel "regret" about it - it is the one thing that has been of great satisfaction & comfort to me these past weeks.

Mrs J. W. was here Saturday & certainly has a very real affection for you. She was very kind as to Reg & Eric, but her greatest wish was that you should not be "doomed" to pleasant hours - which is also my wish, dear.

Things are clearing up a little here - when Kate telegraphed

that she could not come I posted
orders to the telegraphic office &
gave her a summary of my
circumstances, but I had no
expectation of it making any
change when I got her letter
I had put an advertisement
in the Star - & made various
other researches - however
when I got home to-day, I
found Kate here, to my
immense relief - I need if I
can get Miss Baker's state I
can go on - Also on Saturday
Dr B - came up & said he
had given the whole question
his most careful attention
& he definitely advised me to
go to the Adirondacks for the
present - this I consider extreme
by kind of kind, as Dr. never
like to shoulder such responsi-
bility, & it relieves me of
that difficulty of decision
for as long as I can stay of far you

any more account I am well & cannot
as to the election books - I have heard
two places where I see tickets both
to free & retaliation have been
sent to charge 748.00 a week for other
\$10.00, the reason is better above -
I hear I am likely to move third
as - this reason = I have sister
who have been at - both I think
No - I hope to find the books
by necessary to at first - I
myself out soon as possible
I shall have to stay in or
This time I returned with
think we should whether we
your hours as we see from
your returning to see how
the proceedings so we shall
them = I shall take opportunity

Protons & neutrons. I think of the electricity which
to get deep the time - as to knowing how
Coulomb's law is, and the law of gravitation
is $\frac{1}{r^2}$ & so that will be a good deal
more if not entirely correct. It is
that is the clothing that I have had to buy
I have never had any of the usual things
within the house. I had the same matter
of law as it is in the law of the
Inventions - I have not at all the
collected I will never be coming for me
In 15 - after each, when I write the
that are much - this sort of things
quite a good - that much to see
later - I
As to the word "evolution" - it is very common
with the various things - no sets up about that &
sets on the galaxy, world - or some other place
nothing than after occurs the good and, today

a drive with Mrs Keelath
yesterday I drove him to the
chualar. We went off at 5
o'clock & sat there a couple of
hours then drove & walked
home by Levent lane. The day
before he went out to the
back river by cars with
mother. It seemed rather
too tired that day - goes to
bed early - I sleep well, usually
does not cough much & he
sputarates very little, but the
fever is present every day -
on the whole however in
range the first week he took
his temp - it wd be below
 98° in the morning - then up
to 101° or 102° in the afternoon
now it usually is about
normal in the morning -
& has been up to 100° to 101° in
day of course with rare
exceptions - this fever indicates the
continuance of the disease in tertiary

he takes 5 gr^s quinine at night
& 2 after each meal. the indig-
gestion still bothers him &
his appetite is not good, he
likes fruit better than anything
& I am getting cream for him
tomatoes he has especially enjoyed
& Brown says to give him
all he w^d take - There was
no change perceptible in the
lung when last examined
& Brown is to examine him
carefully again this week.

I am anxious to be off
out of the vile dirty city.
I do not think at present
that there is any reason
for your returning if your
Eric unable to be left alone
after two or 3 weeks, then
I think you might come
out tomorrow evening of July
& either head the Metis
party, or come to Eric, & let
me go to Metis & if Eric c^d
