

Saranac Lake
Dec 3^d 194

Dear Love,

The weather is here even of more importance than elsewhere, as we have to live out in it. We had a couple of sunny days in the morning & sat out from 10^o till nearly 1 - then clouds & rain again from 2-4 - when we came in, we decided to be out after 4 - on had days included the sun has set before that time - I see Dr. H. drinking about - I sent another sample of urine to the laboratory last Saturday - & Dr. Kaase was to see Trueman with the result, & also report about his throat, & make an appointment for him to see Eric again within a day or two. His voice is better again though still hoarse - I as far as I discern just goes - I cannot observe that sitting out has any effect upon the kidneys.

I wish I had some good calf-foot-jelly - there are two grades sold at the dist dispensary, one

wrote more wine which, keep^d
better - Eric liked it so much abt
a few ladies fingers - & a few grapes
if anyone had time to put up
a little basket it wd come all
right - by express I sh^d think -
Eric eats so little, & has taken
a most - unfortunate dislike
to oysters, which we got in the
house for tea every now & then
& which I brought in the shell
till he objected to them, so only
had them 3 or 4 times now.

Mrs Marcy had a box of
delicious arays sent her, which
Eric enjoyed one of, they were like
those in Maryland, loose skins
wells & with delicious
flavour, but large - I never
saw any like them before
I don't know what to give
him. These liquid beefs seem
to be of stimulating rather than
satisfying quality. I wonder
if mother wd undertake to collect
a few acels & eels & you might
dispatch them - I hate to trouble
any of you, but I think wd
really enjoy anything from
outside. (As Mrs Marcy remarks
my friends were very attentive

to supply our needs with fuel, & has to supply the
lady - the Librarian as managing, papers, & so on
and well used here, responds in the house books
then over, & then we send them on, I sent
to see the Receipts of Receipts - & the Receipts
to the Janitorium, I send, as below is at the
Laboratory & Dr. P. takes it on =

It is not already done, & so soon as I
thought directed before & as come here
as that is the way - I believe there is an
thing wrong with it - myself. if the authorities
and report in confining the whole inspection to the
whether, he is subject of so little, before to get
& on examination they found no fault in it
at all if you are to occupy that work I expect
to be as careful as may be - & if the careful work
taken up & better again & left out some copy
rights - on the gallery, if so it be no harm the
advised might be that to take out the copy & that
not the other the more, & that the matters I thought
of the Librarian have been marked - also one of those which

is made! then, the sun shines in so early in the
morning - it used to arrive here - I could see, I wonder
if he'd be going in to get to the house later - can you
be discerned to think so -

During the whole of her - we have had her stay
during day, & two half days, I remember, I think
if it's a specimen of her services whether it is not
a fair trial - that improves the circulation
of her mind has fallen last night, & this is the 2^d of
night - he had sleeping tomorrow, I think
I must - but you a letter - a great many were
out-taken - that - by now it - what so now I think
that - I have had till too late.

I shall hope to hear of you all tonight
early has written to me about the shells ^{I want}
to know over some 800. to me, as she seems to think
she is using up the money she meant to have
concerning about 1/2 like to take her money, she might have
the 2^d part of it herself in her old age - I would give a
value for 1/2000 - you can get it - the money from
the paper she sends the two shells long in the state
the shells, you want fresh air, & to take this as easy as you

can - Remember you have the longest part of the session to pull through yet - & I am quite sure that regular exercise w^d do more for you than doctors or medicine - Also I have a much easier mind as to the children when I think of you taking them here or there & seeing enough of them to know what they are about which you certainly can't when doing your work -

Does Mr W.D. never ask for us, or show any interest, he used to be so kind, & I have never heard a word of him since we left - last spring Eric had a letter from Alan in which he said he did not like Paris, it was "too French" is that not a capital remark.

I am glad people look so well - have used of Clare to prefer to go to a doctor alone - poor child - it is advised to have her go at all - I detest that sort of thing for any young girl - I think we had better let her go to France - for a week or two in the holidays.

Change is usually good & it is
not - matter if she did miss a
few ^{days} schooling

And a relief from all the hard
work & worries will be good
for her in any case.

But I must be about
the usual bundling up &
getting out - business. It
looks as if it might be clear
by & by - Eric had a very
quiet good sleep last night
& we like to try the effect of
two weeks cold & seclusion
upon him -

Sincerely
Anna
