ACC. 1010

My dear Sir I should like much to
have the reading of your Thesis
on the Siemens-Martin Steel - a
process which has interested me
much. I have visited Tuxton
to study its workings and have
made some experiments as
it which are still in progress

Your chemical investigations
of the reagents employed and
analysis of the grades of steel made

I should be particularly glad to
see. I can return you the MSS
in a few hours. When do you leave
us?

Yours very truly
P. Sullivan

Mr Harrington
