

## GEOLOGICAL SURVEY OF CANADA

(Museum and Office, 76 St. Gabriel Street) MONTREAL.

Philadelphia 10<sup>th</sup> April 1876

My dear Harrington

I see your telegram late last eve. I quite forgot what I wrote about the woodcut but Fletcher knows nearly, or at any rate can write some thing that will do equally well. — He knows all about the specimen. I saw what I had written. The wood cut is small and it wants something to fill the page. —

Please get the two serpentine columns packed and sent on. I think the two in the Museum rooms would be the best, and their places could be filled temporarily by the two now in the Hall. — We want the pyramid as soon as possible.

And if the pedestal could be a little reduced in size without spoiling the appearance it would be desirable. I omitted to take a note of the square of the pedestal but I think it was 12 feet. would you please send me the exact dimensions. The Greenland people have got one up, an obelisk it represents about 35 million dollars worth. A Dreyman is here and I think we shall get on well together. Porrauth is obstructive and impertinent

Philadelphia Exhibition  
Report &c

Every thing is in a very chaotic state. The Queen  
is the most advanced, and has been presented  
Geological Survey of Sweden. They have been  
The authors are very much troubled by the  
which they wish to open the door as they can not  
Manufactures get many things like paper, by the  
making them out for examination.  
I have taken a loan of a seat in the main house 1126 Grand St  
to which the Institute of American Mining Engineers are going  
and I get meals at a certain rate. There is not much to  
be compared with the toll price, but its justice and more  
provisional. I shall I think if I can manage to go  
down to Montreal next week & come down again before the
