

Frontenac Lead Mines
Park Rd.

B. J. Carrington Esq. Feb. 18
Montreal
Dear Sir

In answer to your
favor I beg to say that during
the last year we have sunk
the main shaft 10 fms. and
driven the 28 fms level about
20 fms by means of the
Diamond Drills worked
by compressed Air. we have
also driven the 18 fms level
and about 30 fms by
hand drilling; for two
months we had a pair
of men stopping between
the 8 and 18 fms levels, we
also just a bling down from 8 to 18
We have just commenced

to sink again and hope to
be driving the 38 fm level
in a couple of months' time
I am glad to say that the
mine improves as we go
down. We are also putting
a wing down from the
18 fm level to the 28 fm level
through a very good course
of ore.

Last year we took
out about 150 tons of
galena the greater part
yielding from 80 to 83 per
cent of lead

Yours truly,

Julius Miles Mgr.

Depth of shaft about 260 ft
Adit about 40 fms in length

8 fm. level	50	"	"
18 do do	50	"	"
28 do do	20	"	"
